

**“Researchers at
the Population
Council are
working to
protect
women’s lives.”**

The No.1 cause of death among women of childbearing age is now AIDS.* This tragic fact inspires Council staff working around the world to develop new techniques and practices to slow the epidemic. We’re proud to say that scientists in the Council’s New York lab are using a Ross Double Planetary mixer in their quest to create a microbicide that is safe for humans – and deadly for the virus that causes AIDS.
